Accidental Placement with Chords

The Standard Stacking Order
When a four-note chord requires an accidental on every note, standard engraving rules arrange them into multiple vertical columns to avoid overlapping:

Column 1 (Closest to the noteheads): Contains the highest note's accidental and the lowest note's accidental.
Column 2 (To the left of Column 1): Contains the second note from the top.
Column 3 (Furthest left): Contains the remaining inner note (the second note from the bottom).
